SUMMARY

Cloud Security and DevSecOps Engineer with 7+ years of experience securing SaaS platforms through full-lifecycle security engineering, automation, and compliance. Proven track record building scalable security programs, leading SOC 2 audits, managing incident response, and implementing CI/CD-integrated security pipelines across modern cloud environments. Adept in threat modeling, vulnerability management, and cross-functional collaboration to embed security into every stage of development. Most recently led security for a high-growth healthcare startup, maintaining a 0-day MTTR on critical issues and passing all audits with minimal findings.

EXPERIENCE

Senior DevSecOps Engineer II (Lead)

Wellthy **January 2022 - Present, Huntington Beach, CA**

- Led procurement, testing, contract negotiations and integration of DevSecOps Security and Cloud Security tooling into the full Software Development Life Cycle. This includes SAST, SCA, IAC, Container, CSPM, Secret scanning, Compliance management, and Vulnerability Management tools.
- Orchestrated an automated vulnerability pipeline that enhanced findings with ML models, pushed results to a centralized databased for reporting, and integrated with internal ticketing systems to ensure remediation and SLA tracking.
- Led and passed multiple SOC 2 Type II audits, establishing and operationalizing controls, processes, and evidence collection to exceed compliance standards.
- Directed all penetration testing efforts for 2023, 2024, and 2025, including vendor selection, scope definition, execution oversight, and remediation follow-up.
- Coordinated with our GRC team to become in compliance with HIPAA, NIST, and GDPR. I also implemented automated checks and remediation to remain in compliance throughout development.
- Conducted prevention and incident response against varieties of attacks including DDOS, brute forcing, scraping, credential stuffing, etc.
- Created incident response playbooks, monitoring, and alerting mechanisms for automated containment and response.
- Audited, monitored, and improved WAF rules in accordance with best practices.
- Managed all security incidents and events, performing end-to-end triage, containment, root cause analysis, and long-term resolution across cloud and application environments.
- Aggregated audit logs from all products and cloud services into SumoLogic; implemented real-time alerting and cross-product correlation rules to detect and respond to complex threats.
- Negotiated, implemented, and administered SumoLogic organization-wide, including contract negotiation, onboarding, and engineering enablement.
- Created and enforced secure development patterns for Terraform, Docker, and GitHub Actions; distributed “Safe Defaults” templates used across engineering teams.
- Introduced and operationalized threat modeling across the SDLC, applying STRIDE to proactively identify and mitigate architectural risks.
- Built and led Wellthy’s first security training program for engineers, increasing adoption of secure coding practices and improving issue detection during code review.
- Founded Wellthy’s Bug Bounty program; triaged, replicated, confirmed, and resolved all submitted findings from external security researchers.
- Maintained a 0-day Mean Time to Remediation (MTTR) for all critical and high-severity vulnerabilities by enforcing rigorous patching and escalation workflows.
- Served as the primary point of contact for all client security questionnaires and vendor audits, strengthening Wellthy’s trust posture and accelerating B2B deals.
- Negotiated multi-year contracts with major security vendors, ensuring tool continuity, cost savings, and alignment with scaling needs.
- Launched and operationalized Dependency Track to centralize SBOM analysis and monitor licenses across our stack.
- Developed internal threat intelligence processes and collaborated cross-functionally to establish a more proactive security posture.

Senior DevSecOps Engineer

CVS Health/Aetna Health **September 2020 - January 2022, Denver, CO**

- Lead Security Engineer for Aetna Health DevSecOps.
- Created integrations, maintained, and administrated: Datatheorem, OWASP Zap, Checkmarx CxSAST, Prisma Cloud Compute (Twistlock), NexusIQ, and Snyk.
- Built a system for all security tools to be easily configured and managed under a single React application hosted in AWS infrastructure.
- Facilitated Security reviews, False Positive reviews, and remediation of security issues.
- Created and maintained secure by default docker images for use downstream in applications.
- Created security automation microservices in Python, NodeJS, Bash, and AWS. Utilizing EC2, ECS, ECR, Route53, API Gateway, IAM, S3, VPC, and lambdas.
- Supported over 4000 engineers on Docker, Python, Security, CI/CD, Secure Architecture, Security Reviews, and Audits.

- Built, debugged, maintained, and improved CI pipelines/CircleCI orbs in Jenkins and Circleci.
- Built and integrated a SIEM (ELK stack) into CVS infrastructure.
- Facilitated technical interviews for DevSecOps engineers and Software Security Analysts.
- Collaborated with Governance, Risk, and Management (GRC) to define, implement, and remain in compliance with security controls including controls governed by HIPPA and PCI-DSS.
- Led procurement, testing, and integration of new security suites.
- Created a operational analyst team to streamline the security vulnerability management program. Included documentation, hiring, and training.

DevSecOps Engineer

Aetna Health **May 2020 - September 2020, Denver, CO**

- Facilitated Security Reviews, False Positive Reviews, and remediation of security issues.
- Created and maintained secure by default docker images for use downstream in applications.
- Created security automation microservices in Python, NodeJS, and bash.
- Held brown bags on docker, python, security, CI/CD, reviews, and audits.
- Built, maintained, and improved CI pipelines/CircleCI orbs in Jenkins and Circleci.

Full Stack Software Engineer

Parsons **March 2019 - January 2020, Colorado Springs, CO**

- Worked with a clearance on microservices and ETL pipelines for multiple sects of the military.
- Created scalable object recognition microservices for images and videos with Darknet and YOLO.
- Wrote/tested RESTful services with Java and Spring.
- Updated and improved AngularJS front-end applications.
- Scanned and remediated vulnerabilities in our applications with Fortify Static Code Analysis (SAST).
- Developed an automated test suite with Postman/Newman.
- Designed Cloud Data Enrichment pipelines.
- Transformed Natural Language Processing, Data Enrichment, and Import/Export pipelines to production code.

Founder / Software Engineer

Formulated, LLC **January 2017 - May 2020, Denver, CO**

- Improved client lead generation conversion rate by 79% that improved revenue by $300k.
- Created Full Stack Web Applications for small businesses that converted leads into customers.
- Contracted by companies to conduct security reviews, penetration testing, and audits.
- Created maintainable and scalable CI/CD pipelines for timely and secure updates.

PROJECT

Home Server

- Manage a 80TB Unraid virtualization server/NAS/docker registry for over 80 users.
- Services include: Bitwarden, Nextcloud, Home Assistant, daily offsite backups to Backblaze and AWS S3, reverse proxy, status pages, game servers, ClamAV, DataDog, Photography servers, over 30+ docker images.
- Maintained under the coop.ninja domain with CloudFlare WAF.
- Logging and SIEM in DataDog with a 99.99% uptime.

FOSS Photography

- FOSS Photography is a simple open source image aggregator for use in design.
- Created after I found issues with sourcing royalty free high quality images to use as placeholders or in my final designs.
- Technologies: ReactJS, Github Actions, Heroku, Snyk.

Deauthentication Detector

- Worked with a peer to create a deauthentication packet detection device.
- Using a Raspberry pi this device detects a deauthentication packet sent across a network and attempts to find information on the source.
- Coded with Python3, Node, MongoDB, Bash and Aircrack-ng.

EDUCATION

Bachelor's of Science in Computer Security

University of Colorado Colorado Springs • Colorado Springs, CO • 2019

CERTIFICATIONS

AWS Certified Security - Specialty
AWS • 2022

Certified Terraform Associate
HashiCorp • 2022

AWS Certified Cloud Practitioner
AWS • 2021

Modern React with Redux Bootcamp
Udemy • 2018

Advanced Web Developer Bootcamp
Udemy • 2018

Full Stack Web Developer Bootcamp
Udemy • 2017

AngularJS & NodeJS Bootcamp
Udemy • 2018

SKILLS

SAST: Snyk, Checkmarx, Fortify, Github Advanced Security Suite

DAST: Probely, OWASP Zap, Data Theorem

SCA: Snyk, Nexus IQ, Github Advanced Security Suite, Wiz

Container Security: Twistlock, Wiz, Clair, Syft

CI/CD: CircleCI, Jenkins, Github Actions

Container: Docker, Docker-Compose

AWS: Elastic Beanstalk, Secret Manager, EC2, ECR, ECS, VPC, Lambda, IAM, dynamoDB, s3, RDS, VPC, Route 53

Terraform

Python: openCV, Django, Flask

NodeJS: React

Databases: MySQL, PostgresQL, MariaDB, MongoDB

Artifact Mgmt: Nexus Repo, Artifactory, Elastic Container Registry

HIPPA, PCI DSS
